

Group 7 Phase 1: Research and Requirements

Project: Palestinian Ministry of Interior, civil-affairs e-services

Osama Manassra (1203378); Sara Ahmad (1221786); Eman Ladadwah (1220719); Donia Assi (1222382)

CRITERION	MARK	COMMENT
Heuristic evaluation thorough and documented	19/25	<i>Your dominant-patterns paragraph rightly isolates the odd/even system as systemic, not surface. But violations 1, 11, 14 are one H8 dense-table problem in three views, and violation 6's undecodable abbreviation (H2/H10, recall-forcing) scored only 1/4... by your own logic, really?</i>
Interviews well-conducted (guide, consent, summary)	18/20	<i>Three-part guide, participant table, five themed findings with verbatim quotes, plus an honest 18-minute, West-Bank-only limitation. Yet P1 logs daily and P2 waits a week: 'exactly the same way', or convergent frustration with different coping? Did the 15-minute average leave any theme thinly evidenced?</i>
Personas grounded in data, full template	16/20	<i>Full-template personas with evidence trails back to numbered violations and a behavioural-cluster table grounding primary/secondary. But the primary flips Mohammad Ahmad to Mohammad Amin, secondary Sujood to Balqis, and Sujood (P3, 'normal, nothing special') is then 'Lina' in S3. Are you sure?</i>
Scenarios realistic, tied to personas, redesigned system	9/15	<i>Each scenario ties to a persona and appends crisp claim sets feeding requirements. But all three narrate the current failing portal (meaningless zeros, wrong week, leaving empty-handed) when the brief asks for the redesigned system: where is Mohammad seeing 'Not yet published' at a glance?</i>
Requirements measurable, mapped to usability goals	13/15	<i>Seven measurable requirements mapped to ISO/Preece and traced to scenarios, with R4's 9-of-10 unpublished-vs-zero and R7's SUS$\geq$70. But says who on R2's 45 seconds? And R3 bundles a time limit, an error-count limit and a task: one testable requirement, or three?</i>
Report written, structured, within page limit	4/5	<i>Evidence trails and a sources column make this easy to mark. The persona naming contradictions and a leftover 'to bebeing masters' artefact show the final proofread was rushed.</i>
Total	79/100	

STRENGTHS Your heuristic dominant-patterns paragraph isolates the odd/even week system as the systemic flaw, not a surface one.

TO IMPROVE Rewrite all three scenarios in the redesigned portal (Mohammad seeing 'Not yet published'), since the brief requires it.

Project choice: Your allocation was the Palestinian Ministry of Interior civil-affairs e-services portal, with the three redesign journeys being: starting a civil document application (e.g. ID renewal or birth certificate), uploading attachments and submitting, and tracking status and collecting the result. You instead evaluated and redesigned the QOU student portal around schedules, grades and course tracking. The methodology you applied is genuinely solid, so the work itself is not wasted, but the subject is entirely different from what was assigned. If we agreed this swap, that is fine; otherwise let's confirm scope before Phase 2 so your redesign, prototype and evaluation land on the system you were allocated rather than a university portal.
